

CORNING

# Engineering Services

## Delivering Next-Generation Performance

A successful network installation has many elements. From network planning and design, to product selection and installation, to post-installation testing and maintenance, each component is critical.

You need a trusted and experienced supplier that can support you throughout every phase of your deployment. Corning can meet those requirements, whatever the scope. Our staff of trained, experienced engineers logged more than 8,600 days in the field in 2015, and they have assisted in the deployment of more than 22 million homes passed. Who better to assist with your network?

# Our Service Offerings

Your requirements may change from one deployment to the next, and whether you need basic product support or a full turnkey solution, we have the answer. Our support services include skilled engineers and product specialists ready to answer your questions and support you in the field when needed. But if you're looking for even more, we can help.

## Furnish

If you're looking for reliable, high-performance products for your installation, we have an end-to-end product offering, as well as the needed support materials.

## Support

Have general network questions, or need specific assistance to complete your deployment? Our offering includes a technical support hotline and product configuration assistance.

## Network Planning Design

For bills-of-material generation or basic design needs, our high-level design services provide the network framework, layout, sizing, and estimates needed to start your deployment off right.

## Engineering Design

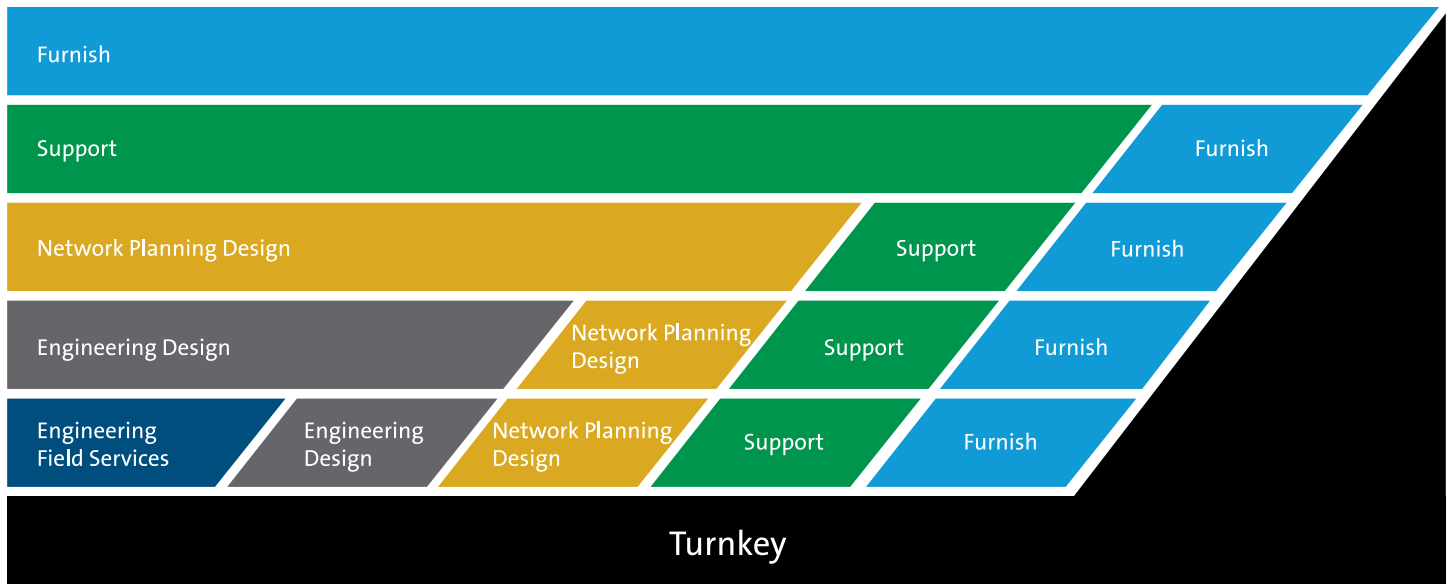

Our detail-level design services provide you with a complete build-ready blueprint of your passive network with field validation and make-ready requirements.

## Engineering Field Services

From prebuild through post-deployment, our engineering field services help manage the whole spectrum, including the initial gathering of requirements, on-site support, and post-deployment assistance such as network testing and record and system updates.

## Turnkey

With a full turnkey project, we manage all aspects of the installation, from network design to on-site construction.

If you are concerned about speed of deployment, labor costs, performance and quality cost deferment, or network future readiness, you are not alone. We deal with these issues every day, and every day we help our customers create their own success stories. Let us help yours be next.
