# 2 Beginning-to-end Solutions For Cell Culture

The surface of our Falcon® Cultureware is rendered permanently hydrophilic via a unique vacuum-gas plasma tissue culture treatment process ensuring a consistent treatment surface. Corning® Primaria™ surface options are ideal for enhanced cell attachment and growth of a variety of primary cells and transformed cell lines in serum-free or serum-containing cultures. Falcon Cell Culture Multi-Flasks enable you to grow more cells faster and easier, thereby making your cell culture workflow more productive. Tissue culture-treated Falcon Multi-Flasks are available in 3- or 5-layer formats and provide 525 cm<sup>2</sup> or 875 cm<sup>2</sup> cell growth surface area. A non-treated surface is also available for suspension or non-adherent cell culture and may also be used to study cell-cell or cell-protein interactions in an in vitro system.

# 3 Beginning-to-end Solutions Microbiology

From sampling and preparation to bacteria growth and analysis, Corning has a range of products and brands to provide a complete solution for microbiology and quality testing. In addition, our Gosselin™ brand products are optimized for both Food and Beverage and Environmental testing laboratories, complying with international safety standards and includes features to ensure traceability.

# 4 Glassware Solutions for Laboratory

In Science, research can take many forms, from synthesizing compounds to building computational models or gathering and analyzing data using a wide variety of instruments and techniques. Corning has been a valued supplier to chemists for nearly a century since the introduction of PYREX® low expansion borosilicate glass that is now the quality standard for labware worldwide. Recently Corning also introduced reusable plasticware range for Laboratory use.
